"UMR... its greatest opportunity..."

On August 26th of this year Chancellor Bisplinghoff addressed the faculty at the General Faculty Meeting. In his speech he touched on almost all of the subjects presently affecting UMR. His talk was extremely interesting, but rather long. Because of the length, the Chancellor's speech will be presented in a series of articles to be run in the coming weeks. This is the first of that series.

GENERAL FACULTY MEETING

August 26, 1975

Chancellor's Remarks

Since I reported to you last December, I continue to believe strongly that UMR, this particular institution and institutions like it, is going to be presented with its greatest opportunity in the next decade. By institutions like it, I mean those institutions that have a central core of science and technology and a commitment to apply science and technology to society's problems.

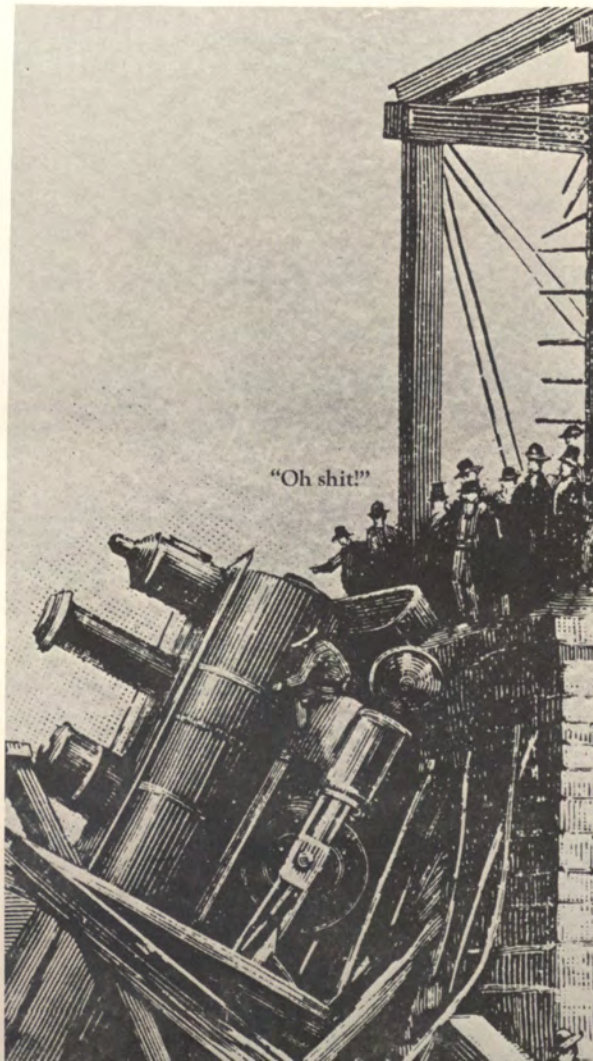

During the balance of the time today I will report to you on progress during the past year together with my assessment of the year ahead and beyond.

ENROLLMENT- At the present time it appears as though UMR's fall enrollment bottomed out in 1974. The present 1975 count is 4,245 compared with 4,006 reported in 1974. By close of late registration, it is very possible that our total 1975 fall count could exceed 4,300 with a graduate enrollment in the neighborhood of 475. We would thus be close to the 1973 fall figure and, hopefully, well on our way to achieving levels of enrollment of the early 1970's.

Following an apparent national trend, graduate enrollment is declining at UMR. A decrease of about 10 percent is noted from 1974 to 1975. Last year there were 376 M.S. and 152

fall," Dr. Bisplinghoff says.

"In regard to the complaints of students who are being housed in property we leased this summer," he continues, "all staff members are doing

UMR alumni, faculty and administrators will be on hand.

UMR-MEC Energy Conference- A Step Towards Solutions

The President of the United States in 1974 established the goal of energy independence by 1980. Since that time there has been a considerable difference of opinion regarding the meaning of energy independence, an even greater difference as to how the goal of independence should be achieved. To some, energy independence is a condition in which the U. S. receives no energy through imports, and it produces all of its energy domestically. To others energy independence is a condition in which the U. S. imports some energy to meet its requirements but only to acceptable levels of political and economic vulnerability. The definition of independence, the criteria for availability, and the technical methods and advancements for meeting it are central to the choice of a U. S. energy strategy and the theme of this conference, "Two Years Progress Towards Self Reliance."

The purpose of the conference is to provide social scientists, scientists, and engineers a means for rapid communication of their most recent research in the field of energy and to offer practical solutions to energy related problems for government and industry.)

These remarks are from the preface to the extended abstracts for the second annual UMR-MEC Conference on

Energy and were written by Dr. J. Derald Morgan, the conference director.

Organized jointly by the Governor's Missouri Energy Council within the Missouri Department of Natural Resources, the faculty of the University of Missouri-Rolla and Continental Oil Company, the energy conference was held on this campus October 7, 8, and 9.

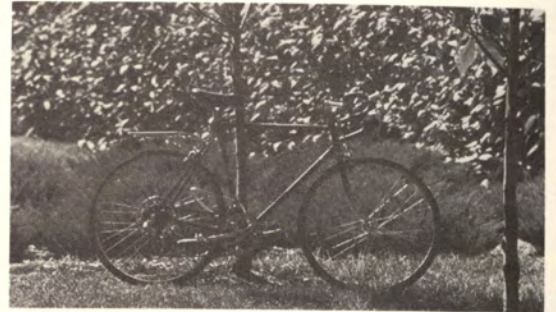

Perhaps the most pressing issue in the world today, the energy issue was looked at and discussed from nearly every viewpoint.

Engineers and scientists came from all parts of the country to discuss the problems involved with energy and to review the latest research done in this field. Although the conference was open to students at no charge, few students took advantage of the opportunity.

Nearly 100 papers were presented by their authors, and were divided into various sessions according to their subject matter. The subheadings for each session were: Wind and Solar Energy, Energy Management, Chemical Energy, Energy Management, Chemical Energy Conversion, Economics of Energy Nuclear Energy and Power, Energy Systems, Energy Resources and Energy Environment.

Energy needs around the world are increasing, while our

supply of fossil fuels is steadily decreasing. Much of the research being done today, as showed by the papers delivered at the conference, is concerned with alternatives to our present sources of energy, while many researchers are also interested in better conservation of energy in our present systems. Chancellor Speaks

on Energy

Tuesday, September 23, Chancellor Raymond Bisplinghoff was the guest speaker at the meeting of the Society of Mining Engineers. His speech was on the energy situation in the United States.

The Chancellor first pointed out how valuable an institution such as UMR will be, particularly in the next few years. Engineers will be needed to develop our resources to meet our country's energy needs. He stated that this school is in "the right place at the right time."

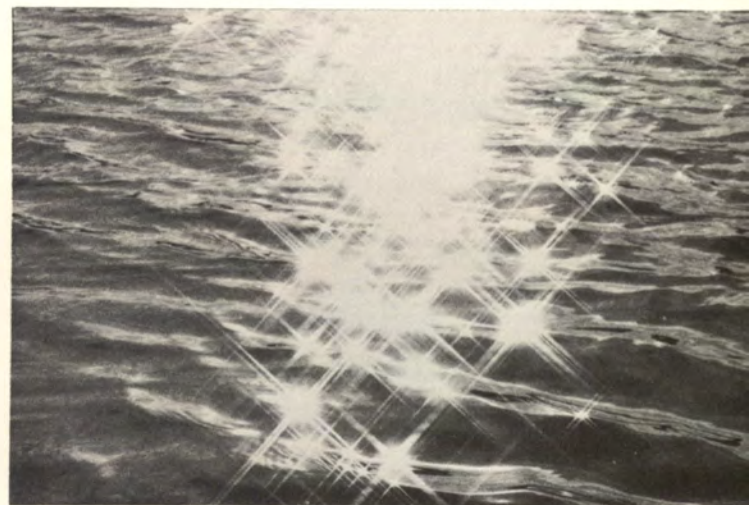

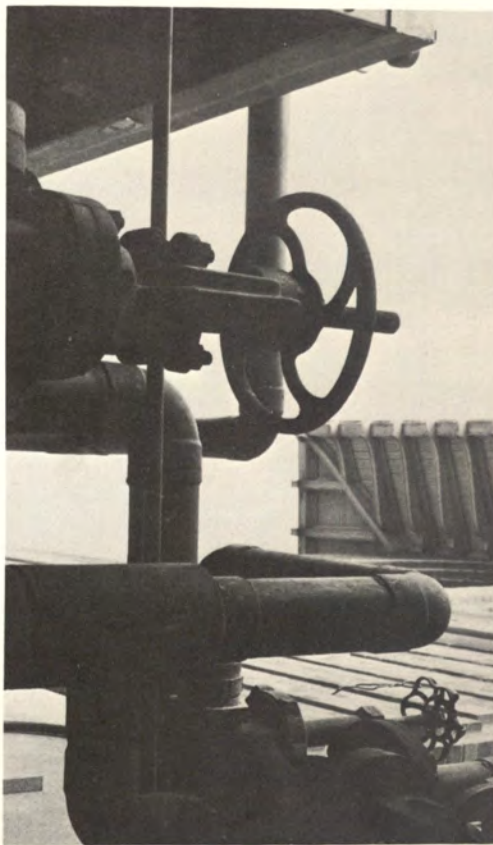

Many people take for granted that the present energy crisis will eventually be taken care of. The feeling is that if we have the technology to put a man on the moon we can surely keep our lights burning. According to Bisplinghoff "things are going to get worse before they get better". He predicted two things; that the U.S. is entering into a period of declining standard of living and a period of hostile action from foreign countries.

Time is becoming a critical factor. Within the next ten years we will see a great shift in the economy. Areas such as New England, heavily dependent on foreign oil can already be seen slipping into a depression. Unemployment in Rhode Island is up to 15 per cent. These facts are a result of scarcity and higher fuel prices. Eventually the government will have to force people to lower their standard of living.

The period of hostile action from foreign countries (as predicted) should be something of concern. We have a heavy dependence on foreign oil now and use of this oil is increasing.

the problems of an energy shortage. The present Congress is not taking the necessary steps to meet these problems.

Bisplinghoff said the future of this country will depend on its capacity to develop its energy resources. In the past it has been shown how growth of energy production parallels industrial growth. He stated the engineer is an important part of the industrial growth and necessary to meet the needs of society in energy.

Solar Energy News

(EARTH NEWS) — New residential and commercial developments along California's 1,100-mile coast line, as of 1977, may be required to incorporate solar heating and cooling units. That's the recommendation of the state Coastal Commission, which holds jurisdiction over development of the coastal zone.

The Commission will recommend to the state legislature that special tax incentives be provided to all developers who incorporate solar heating into their buildings. It has also recommended that local governments along the coast pass so-called "sun rights" ordinances to ensure that all home owners have free and clear access to

solar technology isn't readily available by January 1st, 1977, new buildings will have to be designed to incorporate solar systems when they become available.

The recommendation, if adopted by the legislature, will affect thousands of new coastal developments when the present near-moratorium on building is lifted. The Commission predicts that large-scale solar development could save between 50 and 80 per cent of natural gas requirements for heating and cooling purposes.

In the near future, the power in your home may come to you from outer space. Huge solar cells orbiting 23,000 miles above the earth would gather solar energy to be transmitted to

UMR has hard road ahead

The following is a summary of the Chancellor's to faculty December 9, 1975.

Enrollment — the Chancellor feels that this is the principal ground for optimism in the future. After bottoming out in 1974, UMR achieved a 9 per cent increase in enrollment in the fall, with good possibilities for the same in the 1976-77 academic year. Also UMR had a 4 per cent increase in graduate enrollment.

Housing — the Chancellor calls this the "Achilles' heel of UMR" as we reach for increased enrollment. Negotiations are in progress for Thomas Jefferson residence hall and is the first priority for student; the second being continuation of some form of temporary housing. With more students opting for university housing and the elasticity of the Rolla community to absorb students in private housing decreasing, Thomas Jefferson residence hall becomes increasingly important. The Chancellor feels that the chances of having TJ on some terms by next fall are better than 50-50.

Placement — the fall semester showed an increase in interviews from last spring, but the tightness and rigidity in the market for graduates is still apparent. Job offers are coming

slowly, but with approximately 220 employer visits expected in the spring, there is confidence that this year's graduates will be placed.

Mid-Fiscal Year Budget Status — UMR has had to deal with nearly a million dollar reduction in funds this year, and is anticipating \$437,000 in reallocations in the next fiscal year to meet projected state appropriations. Reduction were made in the work force, concentrating mainly on administrative and support staff. The Chancellor felt that it was no longer possible to reduce the E&E funds, as had been done in the past. A healthy science and engineering school, in his view, requires an E&E percentage of nearly 30 per cent, while UMR's has dropped to below 20 per cent. The University had devised four plans to cope with the anticipated gap between the budget request and Coordinating Board's recommendation to the Governor. The difference between these two amounts is over \$11,000. Two of the plans call for a \$30 semester fee increase, two call for no fee increase. The Chancellor stated that the Governor's recommendation to the legislature was even lower than anticipated, lower than the four plans under study.

The Chancellor has established a Review of

Academic Programs and a Program Review Task Force. To study academic efforts, productivity, and administrative support and to provide by June 1, 1976, a report with recommended actions and

rationale for these actions. Another action will be a review of the entire athletic program at UMR to establish the state of the current program, evaluate the present programs and funding of these, report to the

Chancellor by March recommendations Committee on direction of UMR program's and the fund these program

University of Missouri-Rolla

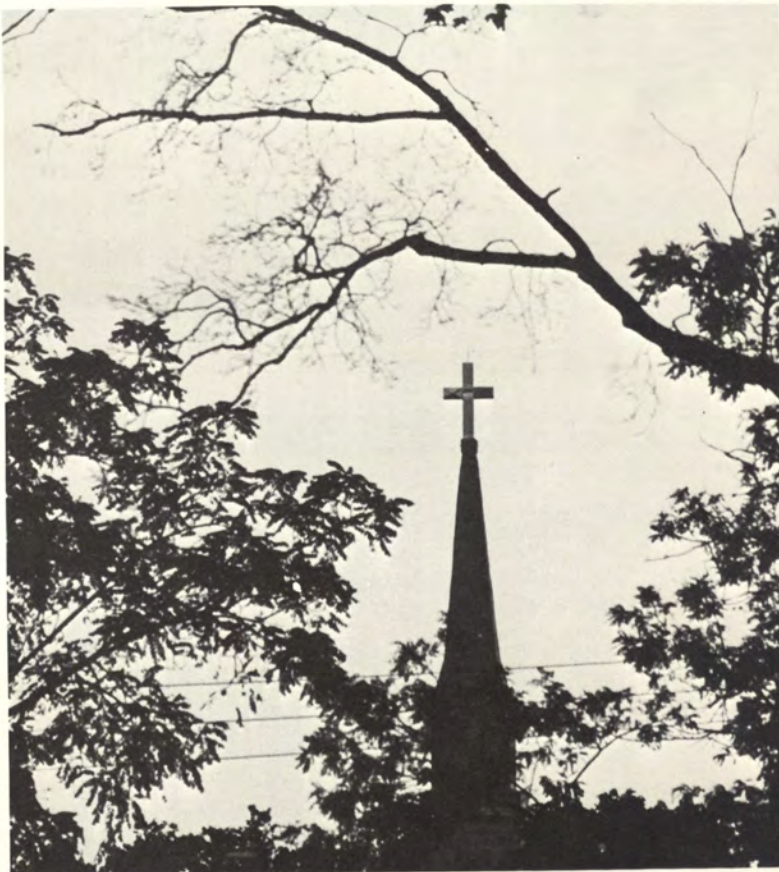

"This midwest bastion of engineering and science education situated in the scenic Missouri Ozarks and consisting of some 4500 undergraduate and graduate students has seen significant changes in the past five years.

In response to the national energy shortage, the coal pile which fuels the university power plant is now under twenty four hour armed guard. New students are advised to steer clear of this area because, in keeping with long standing policy, the actions of the university police on guard may be entirely unpredictable. UMR is one of the fortunate institutions — they at least have

effect. While the number of incoming students has leveled off (and actually declined recently) the number of administrators has quadrupled in response.

UMR still has its computer and access to Columbia's computer, but doesn't have enough allotted money to use them. The Engineering School once unrivaled in the midwest now competes with Columbia's ever-increasing engineering curriculum. UMR is rapidly becoming a leader in the Humanities and Social Sciences, however, in spite of the fact that it has the smallest building allotted to those areas of any university its size in the country.

One interesting aspect of UMR is the appearance of its employees. They are usually dressed in shirt and tie, or semi-formal dresses, even janitors and waitresses. This apparently ambiguous circumstance is

Chancellor Bisplinghoff

Education in Question

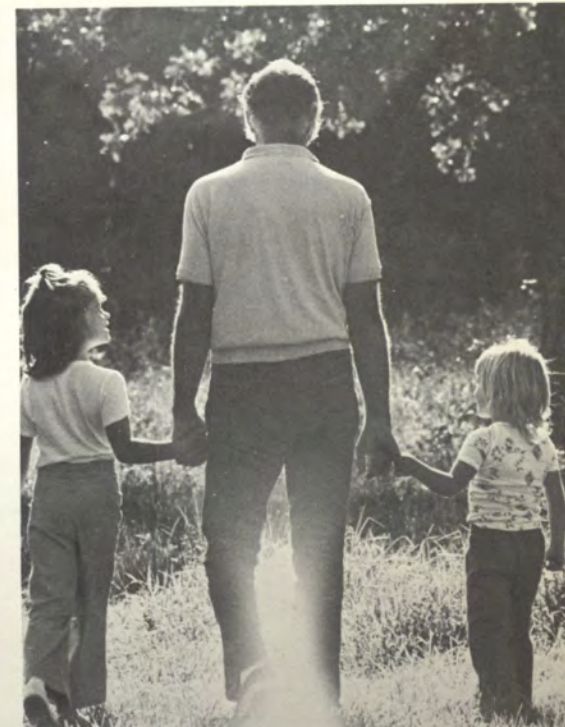

This is the last in the series of articles on Chancellor Bisplinghoff's talk to the General Faculty.

LOOKING TOWARD THE FUTURE—Looking forward I would have to conclude that my view of the general outlook for the future is mixed, but generally optimistic. Insofar as additional support from state appropriations is concerned, I am not sanguine about quick relief from the current downward budget slide. In spite of the severity of energy, non-renewable natural resource and

comparable figure being about 375,000. Thus, for the first time in years, higher education will cease to be a growth industry. There is thus nothing in the total college-age population statistics that presages enrollment increases in higher education. These very statistics are, of course, also followed closely by

"I do not see engineering and science accorded a higher priority in our state system."

depend simply on the law of supply and demand. Radical increases in students knocking at our door will require radical increases in demand for our graduates in comparison with the demand for other graduates. This demand has in the past been made by government, universities and industry. It is not likely that there will be radical increases in demand for graduates by government and universities in the foreseeable future since some attenuation in spending will be required of both if state and national governments are to remain solvent. Radical increases in demand, if they are

The UMR student section of the Society of Women Engineers is growing by leaps and bounds. The membership tripled at the first meeting of the semester last Tuesday. The new members are not just new freshmen; more than a third are upperclassmen who have been at UMR for 2 or 3 years.

SWE is a professional society dedicated to encouraging young women to consider engineering as a career. The national society also aids professional women engineers in many ways. Our chapter engages in many activities to further this aim. Specifically, we talk to students in area schools to inform them about the opportunities open to them in engineering and applied science fields. Last March we hosted a seminar for Technical Women in the Midwest for other chapters in our region. UMR-SWE published its first Resume Book last year. We sold copies to approximately 120 companies.

**Coeds need
love too!**

Dear Editor,

As another party weekend approaches, the social situation on campus persists. Next weekend for St. Pat's "imports" will flood Rolla. Many of the coeds have not been included in weekend plans.

Cheerleaders:

Dear Sirs:

Like most Miner football fans, I, too, have become disturbed at the absence of cheerleaders at football games. I have read many letters purporting to explain this gross violation of athletic tradition, but most of

are too arrogant to offer a plausible explanation. The girls state that they are "offended" by Miner fans and that they don't want to be treated as "sex objects." This simply is just not the case.

Firstly, if the girls don't want to be treated to lewd and lascivious remarks, to be ogled

About Coeds

Editor:

In reply to the letter from Miss A. Coed ((MINER, Dec. 11), skirts, when practical (nice weather), are a welcome sight on this campus. That's not to say that the adjectives "dirty", "ragged", "sloppy", and "uncombed" apply to the average coed when they're wearing skirts; or that a legs-watcher is really interested in a piece of ass. The point is that skirts, with the accompanying legs, usually look nicer than other forms of dress. If this makes me a male chauvenist, I readily accept that label.

No Cheerleaders? Here's Why

Dear Sir:

After hearing many disgruntled male Miners comment on the lack or absence of cheerleaders this fall, I would like to offer an explanation.

We all know that UMR cheerleaders have been given little respect in past years. Undoubtedly the numerous lewd, degrading, and ridiculing remarks about "those UMR cheerleaders" have discouraged many a freshman candidate. After all, who wants to be laughed at? Who wants to show their ignorance by trying

to bring spirit and dignity to an obviously ludicrous job?

It is also a well-known fact that the student body gives minimal vocal support to cheerleaders at football games. Isn't it rather ridiculous to complain that we have no one to lead our cheers, when we have always refused to follow them anyway? It is my suspicion that some petulant Miners are grieving simply because they won't be seeing some girl's behind flashing by in a seires of cartwheels. Is it so incredible that fewer females are willing to submit themselves for that sort of cheap entertainment?

Strangely enough, everyone seems to be complaining about "no cheerleaders," but no one is asking "why not?" I think we all know. In the past it has been a job yielding little or no thanks, little or no respect, little or no support, and an abundance of harassments and obscenities to those few willing to put forth the effort. Finally this year, no girl was willing to put herself in such a position. Perhaps we should be glad — that the prevailing "spirit" among UMR coeds is one of maturity and dignity.

Sincerely
A Coed Herself

U. Housing 1975 An In-depth Look

There has been much concern and controversy over the University housing facilities this year. There are some important questions that need to be asked; "Was the University prepared for the number of housing contracts they signed?"; "Did the University mislead students in the representation of available housing?" and "Is University housing worth its high cost?" The MISSOURI MINER feels this situation should be investigated and the facts exposed.

More Nagogami Problems

Dear Editor,

I recently had dinner at a friend's house, the house happening to be located in Nagogami Terrace. After a while, the conversation turned to the living conditions of the apartment, and I couldn't believe what they were saying.

(the first two times the man turned down the temperature in the hot water heater so not as much hot water would be lost!), and exterior lights have gone unreplaced for a week or more. It is obvious the maintenance man should be returned, but even a petition signed by 46 of 48 renters did no good. Repairs that are made are useless. The

Mizzou vs. Rolla

Recently I happened to be in Columbia, Missouri. Driving by the married student apartments, I was surprised by the condition of the place, so much so that I stopped in. New insulated windows were installed or being installed in all the apartments and everything on the outside that could be painted had a fresh coat of paint on it. Being curious I asked one of the tenants for some information and received the following: He paid \$100-month for a two bedroom apartment which included the free use of a washer and a dryer. Once a year on the outside of the building, the woodwork around the windows, the panels beneath the windows, the doors to the apartment, laundry room, and garbage area, and the water-spouts and raingutters were painted. If the tenant wished it, his name would appear on a list and the inside of the apartment would be painted by the school, but the tenant might have to wait from a week to several months for this to be done depending on the length of the list of names. Ending our brief interview, I was told that the maintenance was "good."

The University's View on Housing 'A temporary solution'

An Interview with Jess Zink

Few people are happy with the new housing being provided for this year. Let's look at it from the University's viewpoint:

The housing office had two choices: either inform incoming students that no University housing was available, or try to find accommodations for the 300 person waiting list. Indications

students wouldn't come to school here. So, the search for accommodations began.

During freshmen orientation, new students were told that the dormitories were filled, but that every effort was being made to acquire housing. It was at this time that many students were led to believe that Thomas Jefferson Hall would be the new

leased from private individuals to house students for the current year.

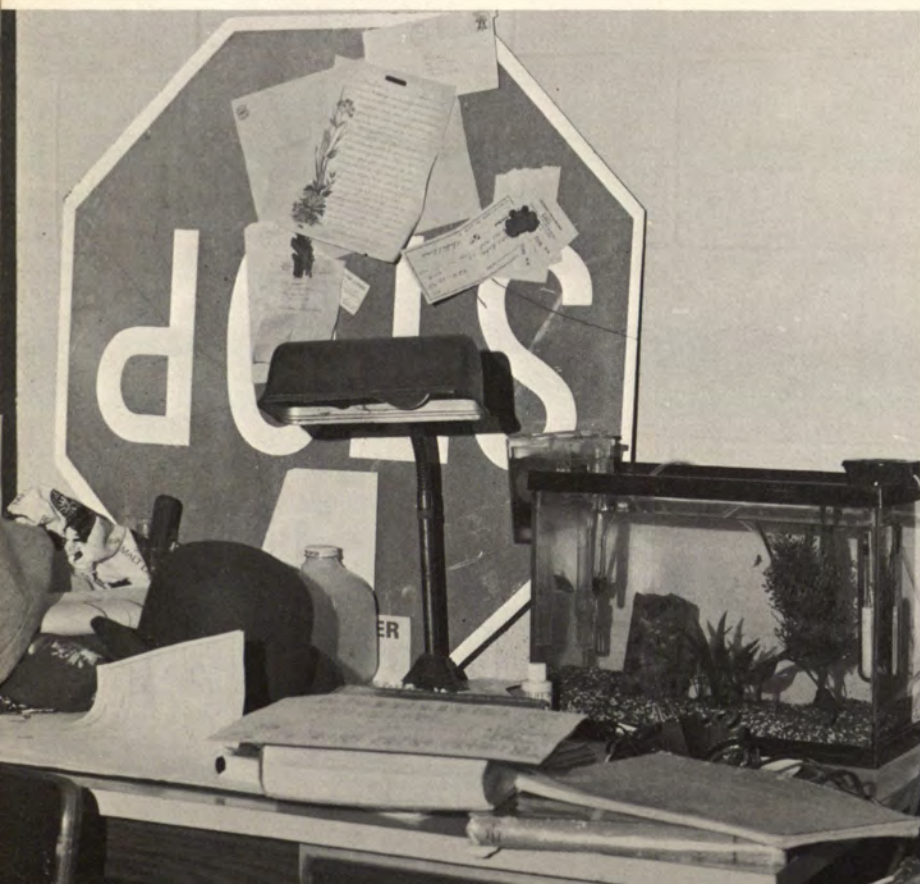

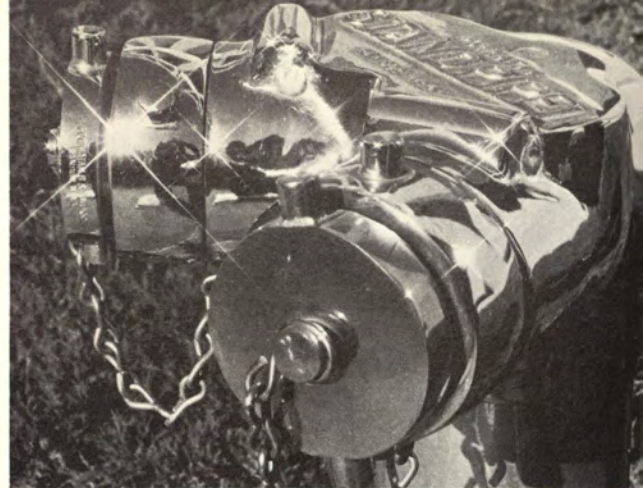

Mr. Jess Zink, of Auxilar Enterprises, admits that the newly-acquired residence halls are, in some respects, not the same as the older residence halls; but feels that with improvements that are being made, they will soon be up

hope for a solution

Officials at the University of Missouri-Rolla are continuing to work vigorously to find solutions to the student housing problems in Rolla.

"It is generally accepted that without a permanent solution to the housing problem, an upper limit to enrollment will be established," says UMR Chancellor Raymond L. Bisplinghoff, "and we are probably at or near that enrollment level at this time. Considering UMR's mission to provide more technically trained graduates to fulfill the nation's growing needs, we should provide a maximum flexibility of enrollment."

Discussions of future student housing considerations are under way with University-wide officials in Columbia and they have expressed a desire to

fall," Dr. Bisplinghoff says.

"In regard to the complaints of students who are being housed in property we leased this summer," he continues "all staff members are doing their best to solve student problems on an individual basis. It is our policy to consider the complaints with a cooperative and conciliatory attitude and work out individual solutions in the best interest of each student. We are continuing to make improvements in the physical facilities as rapidly as possible and are making shifts in room assignments whenever possible. Housing on campus and in the Rolla community is severely limited and although we are making progress, these adjustments will take time and will require the patience of all the concerned individuals."

University Purchases T. J.

An agreement has been reached between UMR and the Connecticut Mutual Insurance Co. to purchase the Thomas Jefferson Residence Hall for \$1,130,000.

The dormitory is located two blocks north of the main campus at 18th and Rolla Streets. It was first opened as a private residence hall in September, 1966, but was closed to university students in 1973.

The purchase is being financed through a mortgage and unrestricted and redesignated private gifts to the UMR Development Fund.

"This is a major achievement for our campus," UMR Chancellor Raymond L. Bisplinghoff said, "and we owe a great debt of gratitude to all those who have worked so hard to assist in acquiring this facility. This is particularly true of those private donors who helped to make this purchase possible."

Bisplinghoff said that he feels this acquisition removes a major stumbling block to UMR's continuing growth. "Last fall we were severely handicapped by inadequate housing. We know some students did not enroll at UMR as a result. If we had not ob-

tained this dormitory we feel certain this fall's enrollment would have been severely curtailed."

To Open in September

Once all papers are signed and legal arrangements completed, UMR will begin work on renovation required before Thomas Jefferson can be opened for use next September. This renovation is expected to cost about \$250,000 and will be financed through an internal, short term loan involving other development funds. Both this and the original mortgage will be paid back out of income from the dormitory. No state appropriated money is involved.

Without Thomas Jefferson, UMR has dormitory space for 611 students. As of this date, the housing office reports that it already has more than 850 housing requests. 240 more than present space.

Last fall's housing shortage was so acute that space in private facilities off campus was leased temporarily to house about 300 students. Joseph D. Wollard, UMR business officer, reports that "subject to availability this fall, these

leased facilities will be considered only if there exists a need and all permanent space is filled."

Thomas Jefferson Residence Hall has double occupancy space for 524 students, plus space for six resident assistants and a housing manager. Its room and board charges will be slightly higher than for other UMR dormitories. Double occupancy rates in Thomas Jefferson will be \$1,350 for the academic year, compared to \$1,250 in the other UMR dormitories. Single room occupancy is \$1,530 in the new hall compared to \$1,430. Summer occupancy in Thomas Jefferson is \$370 for a single room and \$330 for a double room, compared to \$335 and \$295 in other Rolla dormitories.

Extras Cost More

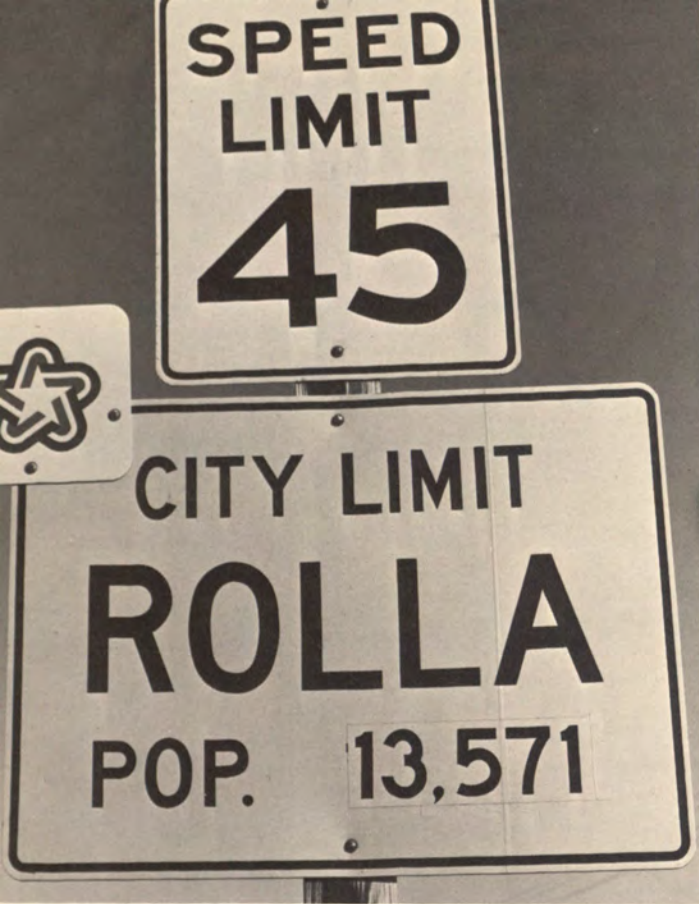

The slightly higher fee for the new facility is to cover added extras such as air conditioning, free parking, elevators, swimming pool, lounges on each floor and the basement level which includes physical fitness and game rooms.

Thomas Jefferson will be operated by auxiliary enterprises. The design of the facility offers flexibility to

consider assignment by clusters to accommodate men, women and special interest groups such as graduate and international students. The hall has centralized dining facilities.

Join the BikeCentennial

There is still time to apply to join the Collegiate Cross-Country Bike Ride being held in honor of the American Revolution Bicentennial, according to Steve Danz, College group co-ordinator.

The special college-age group will be leaving from Pueblo, Colorado and arriving approximately 45 days later in Richmond, Virginia. Thus far, college students from 20 states have joined. The route itself will follow the Trans America Bike Trail. The trail will be newly inaugurated this summer, and students must be members of the official Bikecentennial group to ride the trail. It is estimated that the riders will

cover 50-70 miles per day, and will camp and stay in youth hostels on the trip. While thousands of bikers will be on the trail, no single group of riders will number more than 12, in order not to over-load the trail or the accommodations en

The University and Chamber Choirs this year were active in numerous events. The spring led to another serious production and a trip to Memphis, presenting bi-centennial music with the band.

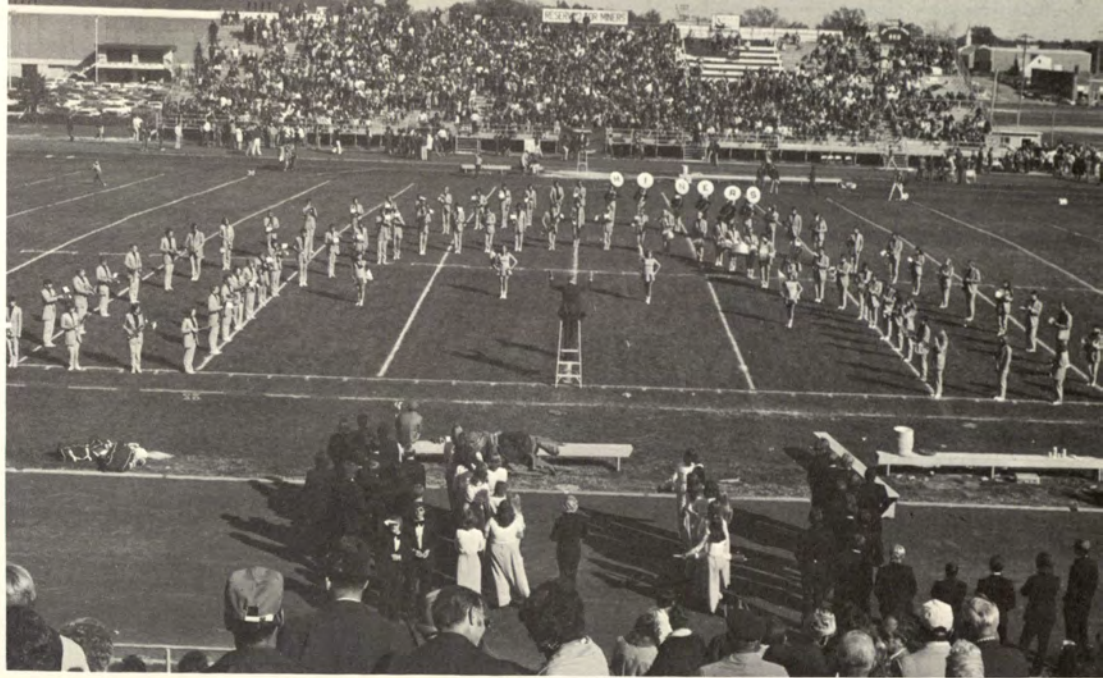

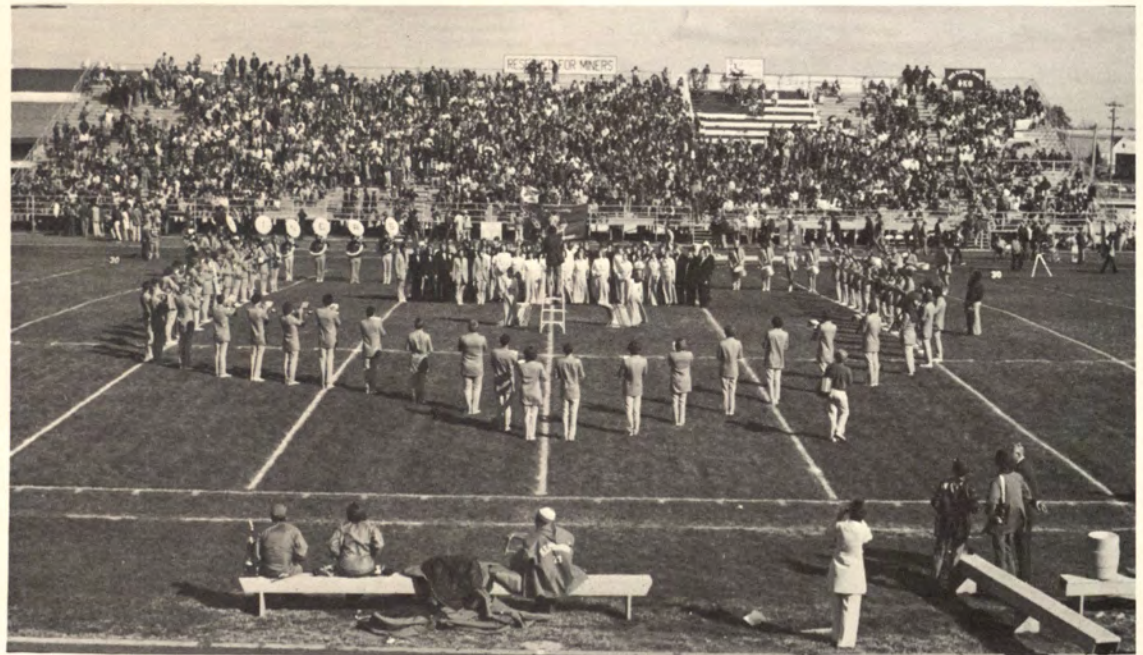

UMR

Again this year the bands of UMR were active in their support of the activities of the campus. The Miner Band started the year out by playing for a Cardinals football game in Busch Stadium, St. Louis. They were also always on hand at the Miner football and basketball games, lending a great deal of support. Along with these they found the time to present several formal concerts through the year. They topped it all off with a performance at the inaugural ceremony of the 35th Annual Cotton Carnival in Memphis, Tennessee.

MINERS SUFFER THROUGH DISAPPOINTING SEASON

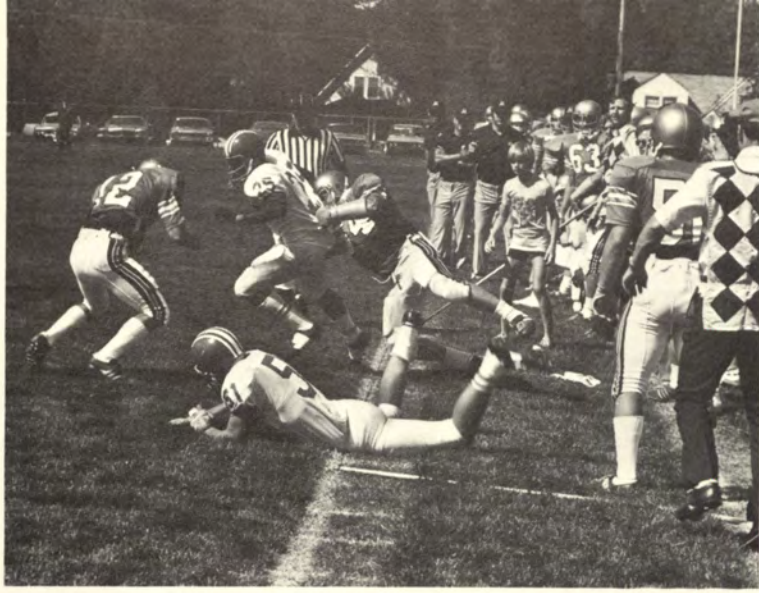

It was not a good year for football at UMR, but it wasn't as bad as the 1-8-2 record would seem to indicate. There were no easy games on the schedule this season. With a little luck and a few breaks, the Miners could have easily won five or six games. The Miners seemed to be plagued by Murphy's Law: If anything can go wrong, it will. Blocked punts, fumbles, interceptions, and other miscues hounded the Miners constantly. Injuries to such key players as All American tight end Merle Dillow, running back Steve Townsell, and wide receiver Stu Dunlop crippled the team at times.

The highlight of the season was the final contest against SMSU in Springfield. The Miners averted a winless season by upsetting a very fine team in an exciting game. The victory seemed to take some of the pain out of the earlier defeats.

MINER BASKETBALL

Miners Take First in MIAA

The UMR basketball team won the MIAA conference title for the first time in the school's history. To win the championship, they had to defeat Central and Southwest on the road in the final two league games of the season. They beat Central 74-64 in Warrensburg, and then on February 23, they travelled to Springfield where they humiliated the Bears by a score of 83-66.

As the MIAA champs, the Miners represented the conference in the NCAA College Division II South Central Regional Tournament held in Louisiana. Grambling College knocked UMR out of the competition in the first round by beating them 67-61. In the consolation game, the Miners faced Lincoln and lost in overtime.

It was a very good year for basketball in Rolla. The team lost only one game at home while winning twelve. Their overall record of 18-9 is one of the best in recent years at UMR.

Rifle Team Finishes 8-1

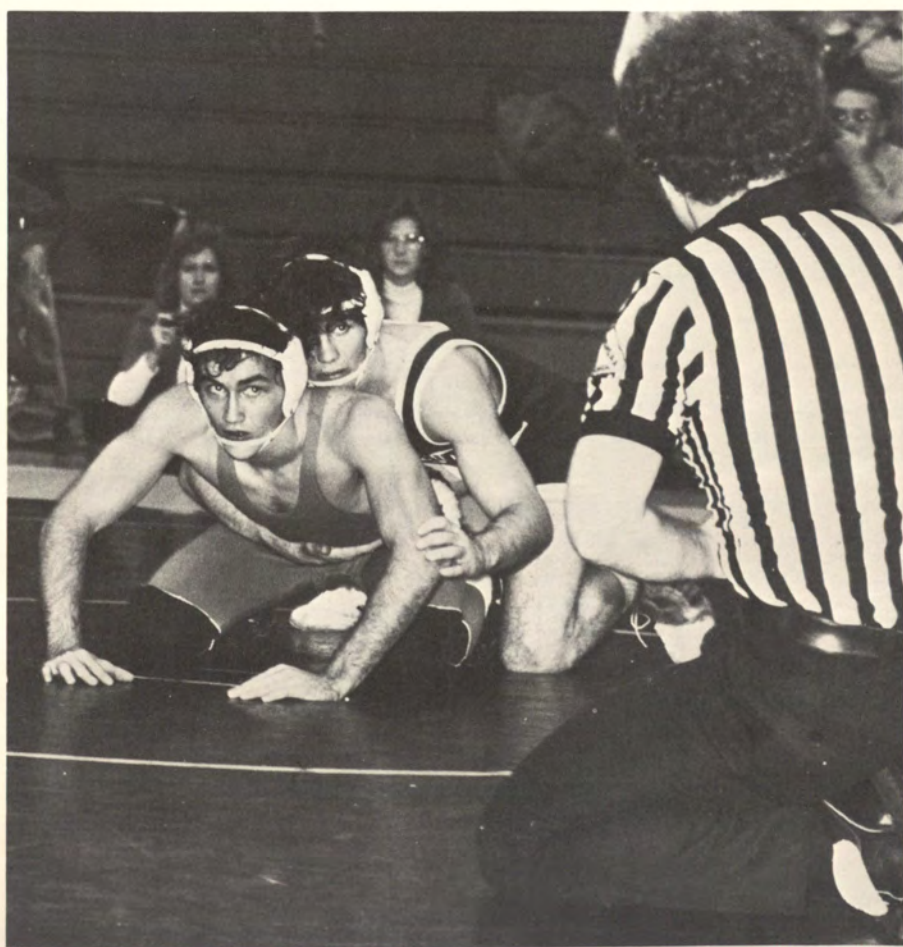

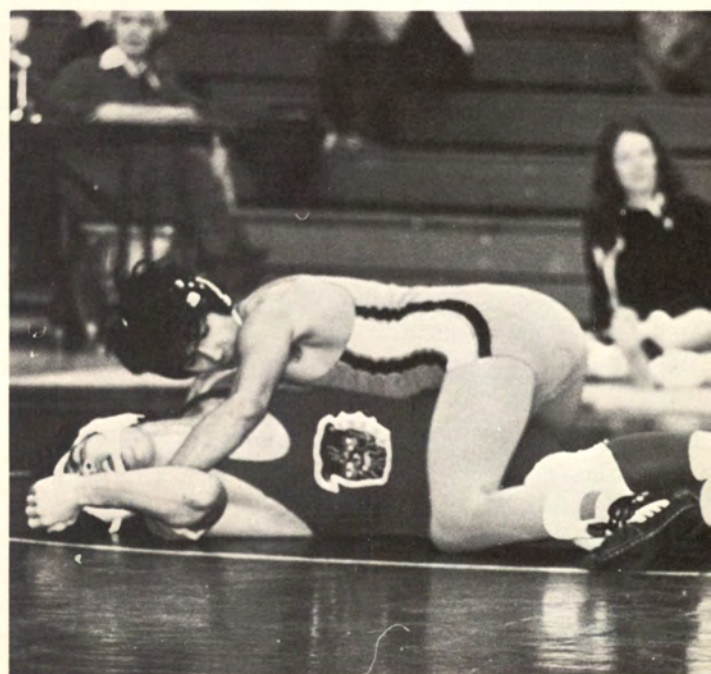

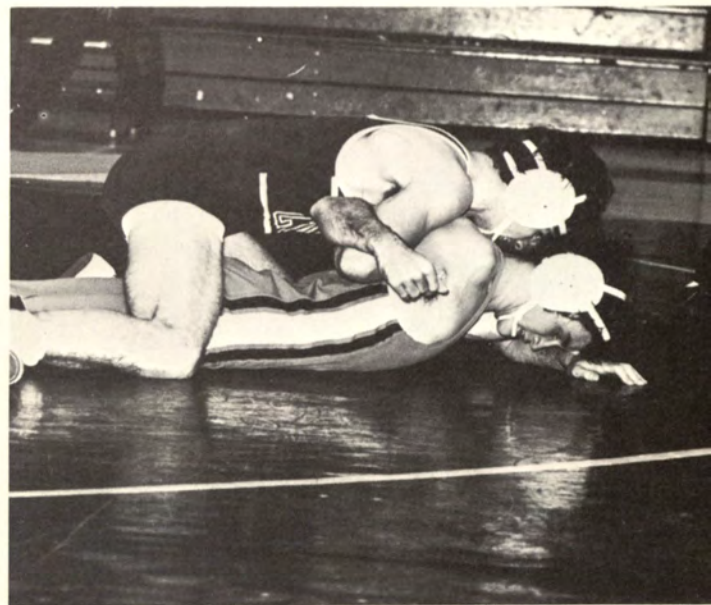

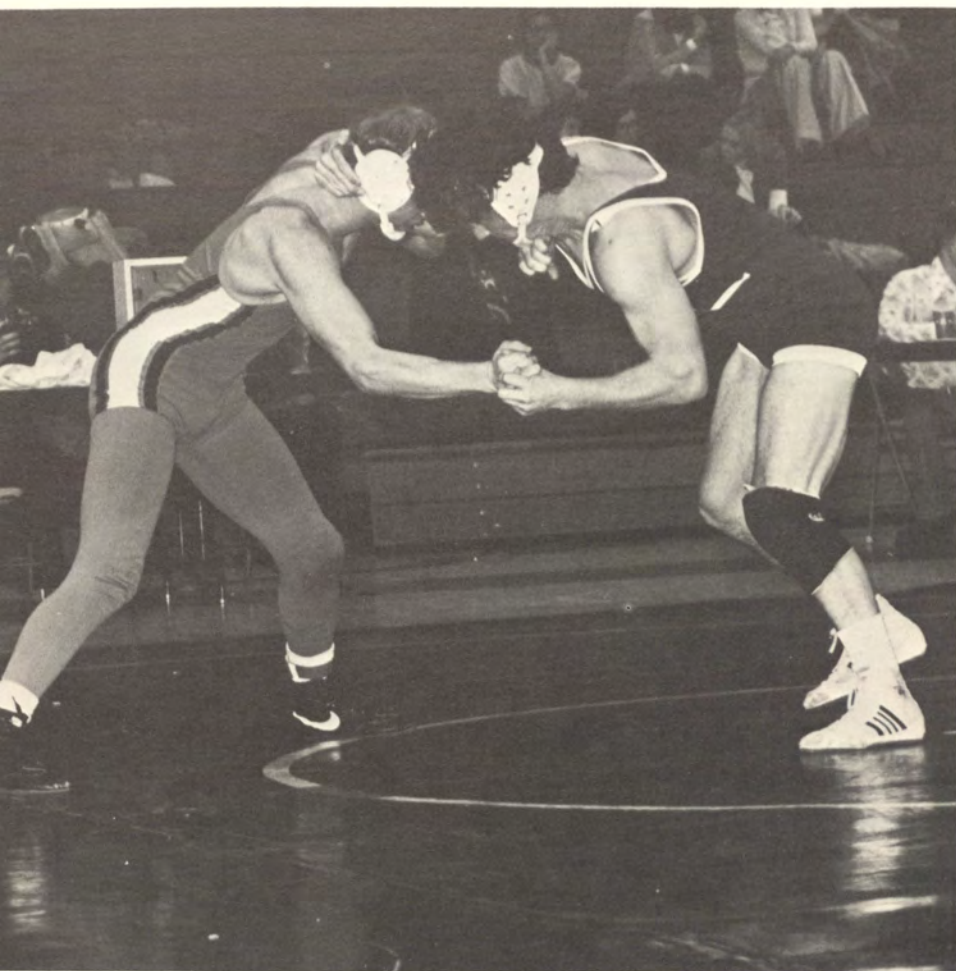

Top row: Ruth Francis, David Oakes, MSG Screeton. Bottom row: Gary Shrewsberry, Mike May, Gary Mueller, Pat McCann, Chris McCann.

UMR Pistol Team

Left to Right: Steve Allen, Burl Reynolds, Mike May, Mark Masnor, Paul McCoy, Ken Brugioni.

The Miner wrestling team was short on personnel at the start of the year, but it got worse as the season progressed. Injuries kept five of the top grapplers off the mats for most of the year. For the season, the Miners finished 2-8 in dual matches despite the fact that they never entered a match with an entry in every weight class.

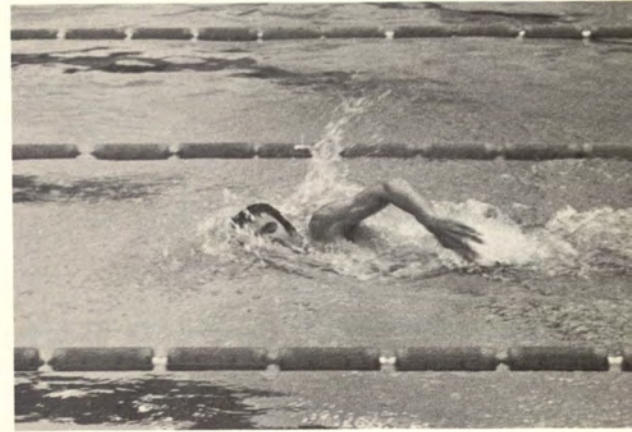

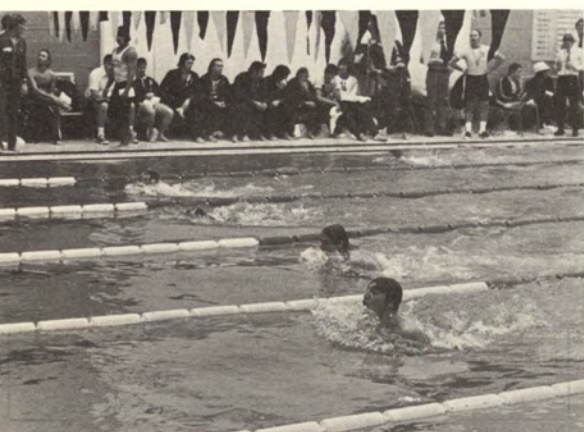

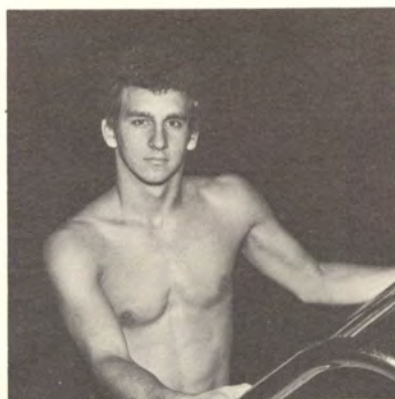

Injuries Hamper Grapplers

Bottom row: Gary Ordelheide, Darrell Taylor, Lee Ruppert, Tom Lyons, Matt Heinicke, Mike Ackerson. 2nd row: Paul Conant (Mgr), George Engel, John Dolan, Richard Erickson, Mark Frahenbuhl, Mark Draper, Dale Taylor. 3rd row: Coach Pease, Cathy Mullins (Mgr), Brad Schreiber, Beth Stevens (Mgr), Randy Lebbert, Larry Padfield, Mike Oclon, Bob Bert, Mike Norberg, Tim Kirschbaum, Leonard Wolff, Dana Witt. Back row: Mark Mateer, Reed Curtis, Kevin Humphrey, Rusty Curtis, Paul Vetter, Darrel Woodroof, Bill Orr, Steve Brown.

Swimmers Take 3rd Straight MIAA Crown

Front row: Larry Wuerz, Al Whitmer, Jim Eckelkamp, Mark Mastrionni, Greg Best. Middle row: Don Short, Ted Kelly, Bob Hart, Bill Long, Kevin Killian, Greg Derbak, John Busse. Back row: Brian Flynn, Kevin Pace, Mike Simac, Rusty Litchfield, John Moritz, Mark Moran, Coach Chuck Broyles.

UMR Varsity Baseball

The Miner baseball team battled to a 2-18 record during the 1976 season. Although beginning the year with a nucleus of good ballplayers, the team suffered from a lack of depth. UMR was unable to combine good pitching, hitting, and defense. When the pitching and hitting was good, the defense faltered and vice versa. Numerous one-run losses were an indication that the team was much better than their record showed. With a young ballclub this year, many players will be around for several more years.

Back row: Carol Russell (Mgr), Jeannette White, Ronnie Dorling, Teri Noelker, Peggy Knapp, Rebecca O'Dell (Asst. Mgr), Front row: Coach Annette Caruso, Joy Ewen, Debbie Gower, Kathy Holt, Jennie Adkins.

The women's basketball team had a good year although their won-lost record was only 3-7. During much of the season, the girls had trouble putting the ball in the bucket, but in the final game of the season they ran wild and beat Lincoln 62-24. The team improved quite a bit during the season and Coach Caruso expects them to be even better next year.

Tec-Engine Captures Basketball

Tec Engine defeated Sigma Phi Epsilon in the finals of intramural basketball competition to earn the title. Tec Engine overcame an early season defeat in league play against Sig Ep before reaching the final. A balanced scoring attack and some excellent ball-handling were the keys to TEC's success. Sigma Nu finished in third place as they won the consolation game.

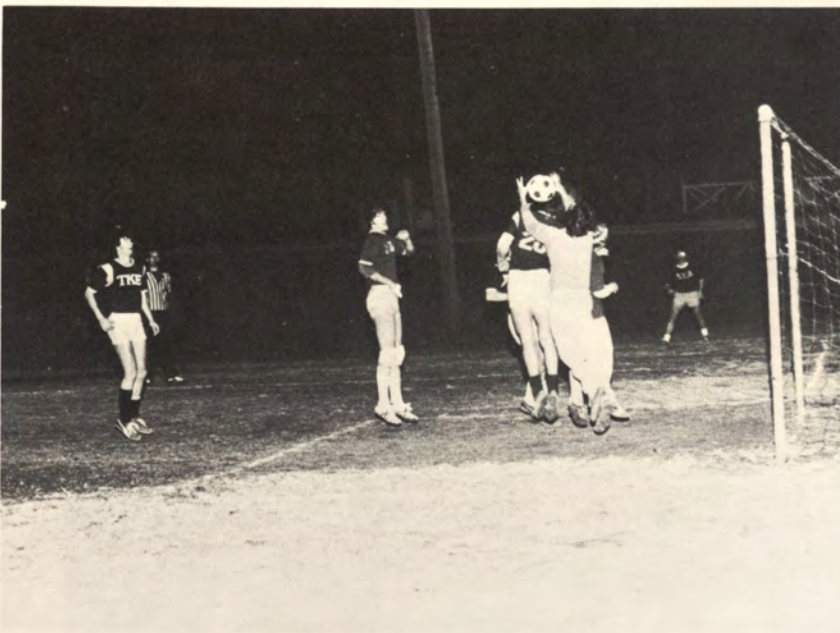

TKE STREAKS IN SOCCER

An aggressive team from Tau Kappa Epsilon defeated Lambda Chi by a score of 5-3 to capture the intramural soccer crown. TKE led throughout the game as they scored in the first minute of play and went on to build a 3-0 half time lead. In an exciting consolation game, Sig Nu defeated Sig Tau on penalty kicks after a scoreless sudden-death overtime.

BETA SIG DETHRONES TKE

Beta Sigma Psi dealt TKE its first volleyball loss in three years in a semifinal match and went on to outclass Tech-Engine in the finals. Beta Sig's four spikers kept opponents on the defensive throughout the year as they consistently nailed the ball to the floor. TKE won the consolation game by defeating FLA.

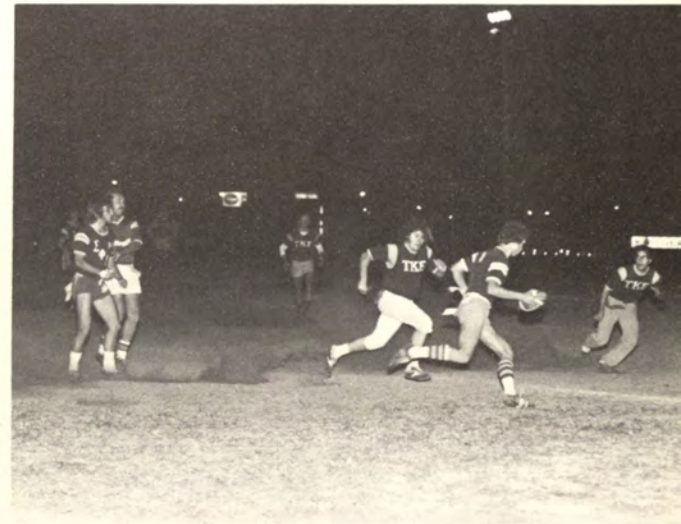

SIG EP TAKES FOOTBALL

The intramural football season was climaxed by the championship game between Sigma Phi Epsilon and Tau Kappa Epsilon. Sig Ep had defeated Tech-Engine 49-20, and TKE edged Sigma Nu 35-32, to set up the final contest.

The championship game was played October 23, under less than ideal conditions. Strong winds, gusting up to 20 mph at times, created a dust bowl on the grassless playing field. The wind was so strong that neither team could score against it. TKE did all their scoring in the first half, and Sig Ep got all their points in the second. It was an exciting game, and the final score was Sig Ep 31—TKE 14.

PANHELLENIC

The UMR Panhellenic Council is composed of representatives from Zeta Tau Alpha and Kappa Delta sororities. Its main purpose has been to set standards for organized rush and to inform incoming freshmen women of the opportunities offered by sororities. We work closely with the IFC during the Greek Week activities and participate actively in their other programs such as the IFC Clean-Up. The Panhellenic Council brings the sororities together to work toward our common goals.

KAPPA DELTA

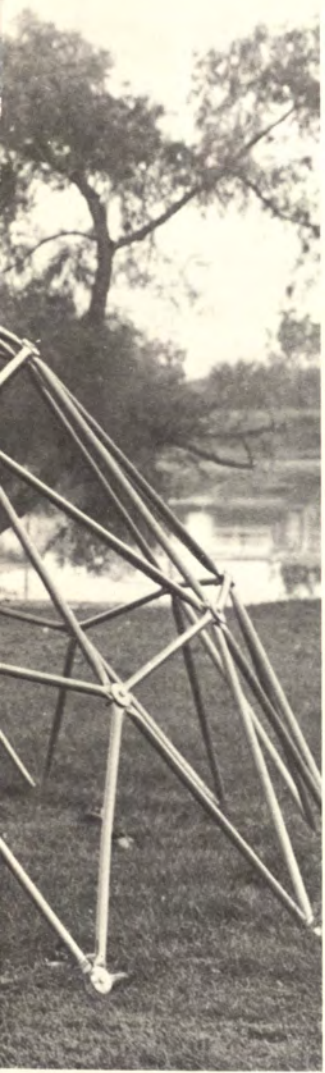

The Kappa Deltas started their fourth year on the UMR campus with a great rush which doubled their numbers. The year progressed toward Homecoming when the pledges set up the display of "General Store". Throughout the year the KD's played in almost every intramural sport with much spirit and support. Kappa Delta's Founder's Day, October 23, was celebrated with a dinner and a program by the pledges. Just before the semester's end, KD took two second place trophies in the IFC Sing. Second semester brought St. Pat's, Greek Week, more intramurals, and of course Spring Formal. The year ended with plans for next year's fall rush.

ZETA TAU ALPHA

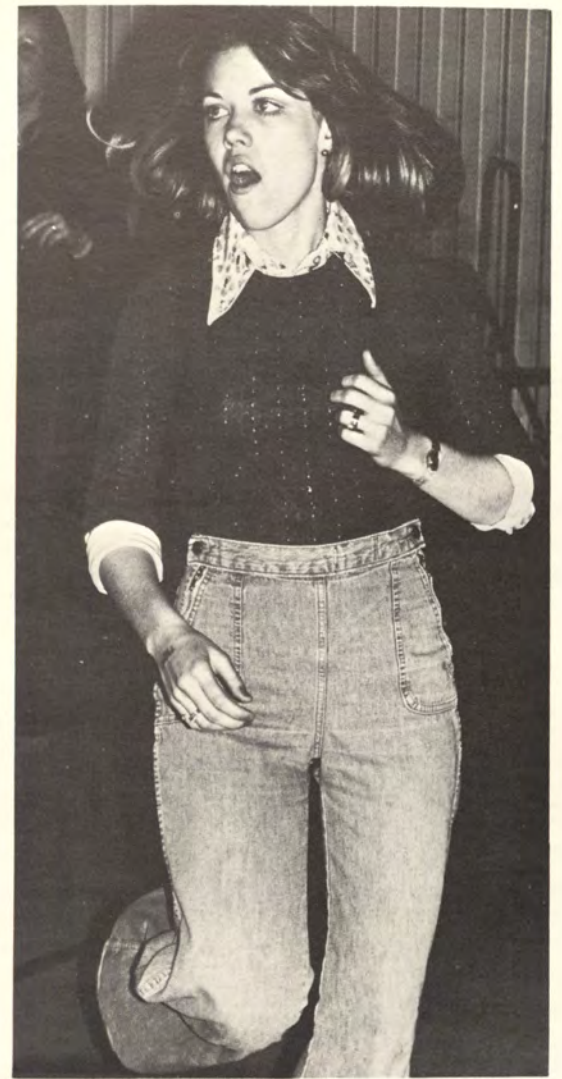

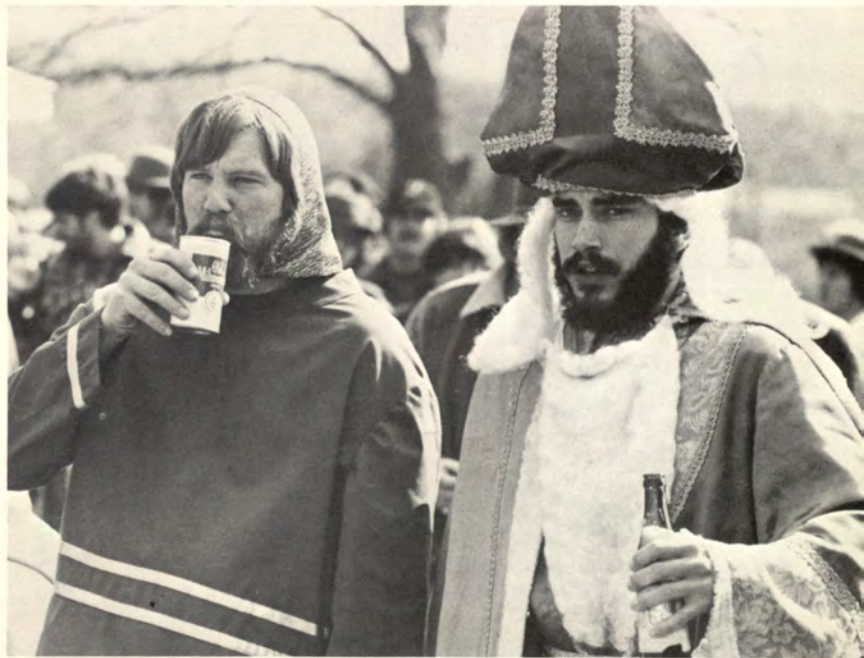

Zeta Tau Alpha fraternity for women is involved in a major part of the campus activities here. These include various service projects, intramurals, and special university programs. Besides these, the fraternity does much as an individual group, including such things as parties, and other informal get-togethers. Monthly programs hosting guest speakers are also held. On the whole, the fraternity stresses the importance of the well-rounded individual.

TECH-ENGINE CLUB

Tech-Engine Club had a great year in all campus activities. In its first year of existence, TEC reached 100 members and had the lowest board bill of all eating clubs on campus. The first memorable day for Tech-Engine came on December 5, 1975, when they burned the mortgage and became complete owners of their building. Tech-Engine showed its superiority in the Independents' Weekend games by winning the overall championship. President John Guerdan was named Independent Man of the Year. TEC was active in the intramural program, placing 1st in swimming and basketball, 2nd in softball, and 3rd in football, and winning the overall championship.

Our secretary was asked by the ROLLAMO office to write a paragraph on our fraternity during the 1975-76 school year. After considerable thought, he asked the members what should be put in the yearbook article. His inquiry brought forth two points. First, no one could decide just exactly what to put in the article, and more importantly, it was brought to his attention that no one ever reads the articles. Instead, everyone looks at the picture. Therefore, our secretary refuses to write an article which he doesn't precisely know what to write about and which no one will read anyway. "It would be a complete waste of my time." The Secretary.

In 1975-76, Alpha Epsilon Pi enjoyed a very outstanding year in activities and scholarship. Striving to impress upon our members the importance of becoming a well-rounded individual, AEPi participated in the IFC Fall Clean-Up, staged a work day at Boystown, and started plans for a traffic safety project with the Rolla Police Department.

We started the year off socially with a rush function with ZTA. To add to our fun and excitement, we became lumberjacks for IFC Sing, built a St. Pat's float, and collapsed our chariot in the chariot race at the Greek Week games. All of these events were followed by action-packed, fun-filled parties.

To break our monotony, we finished the semester by achieving the highest fraternity grade point and most improved grade point awards from the IFC.

The Brothers of Epsilon Psi Chapter of Alpha Phi Alpha dedicate themselves to brotherhood. In our house here at Rolla, we try to extend our high moral standards as well as imprint the necessity of good academic standings to our pledges. We believe ourselves to be instruments of communication and have been delivering a message of brotherly love through the songs we sing, the steps we take, and in our everyday endeavors. Our house is always open and visitors are always welcome.

Beta Sigma Psi is a national social fraternity comprised of Lutheran men. This past year we captured first place in intramural volleyball, and actively participated in all other sports. We again showed our strong St. Pat's spirit by building the third place float and a superb cudgel that placed third. The brothers of Beta Sig also worked together to design and construct a memorial bar and lounge in the house. Our Little Sisters planned various social activities throughout the year which included a sock-hop and a square dance.

The brothers of Delta Sigma Phi have overcome another year of the Rolla Blues here at UMR. Starting the year out with 36 new pledges, things have continued to roll thanks to rush chairman Don Cline and others. John Dolan captured the trophy for the pie-eating contest at Homecoming and the house took second place in the twelveth man award. Todd Davis was the proud recipient of the outstanding intramural wrestler award and the bowlers led by Eddie Dixon took first place. The house also won the Gamma Alpha Delta award for planning and execution of projects.

Delta Tau Delta has been active in school and community affairs this year. We held our annual can-goods collection drive for the needy during Christmas and also organized the Muscular Dystrophy Campaign for Rolla. We participated in GAD, painting and insulating the homes of elderly people as our project. We know we're "out in the sticks," but if you're ever out here, stop in.

Once again, Kappa Alpha had a very satisfying year. For the ninth consecutive year, KA placed first in intramural wrestling. The brothers also did well in tennis, softball, swimming, horseshoes, and bowling. KA's excelled academically and were active in campus affairs. KA undertook several all-house work projects with Gamma Alpha Delta, and received two awards for outstanding participation. Again, KA held the annual Christmas party for the needy children, and was actively involved in the successful Muscular Dystrophy Drive. Kappa Alpha's proudest achievement this year was the initiation of 21 outstanding men into the fraternity. The outlook for next year is even brighter.

The school year 1975-76 proved to be very successful and rewarding for Kappa Sigma. Once again, Kappa Sigma excelled in scholarship, leadership on campus, athletics, and of course, social life. Kappa Sig has remained active on campus with a strong showing in intramurals and capturing first place in Homecoming decorations two years in a row. The acquisition of a superb freshman class has helped us to remain on top at UMR as a fine brotherhood.

The Beta Chi chapter of Kappa Sigma's chapter house presents a personal challenge to each member to help to carry on the fraternity traditions, and continually strive to improve the chapter.

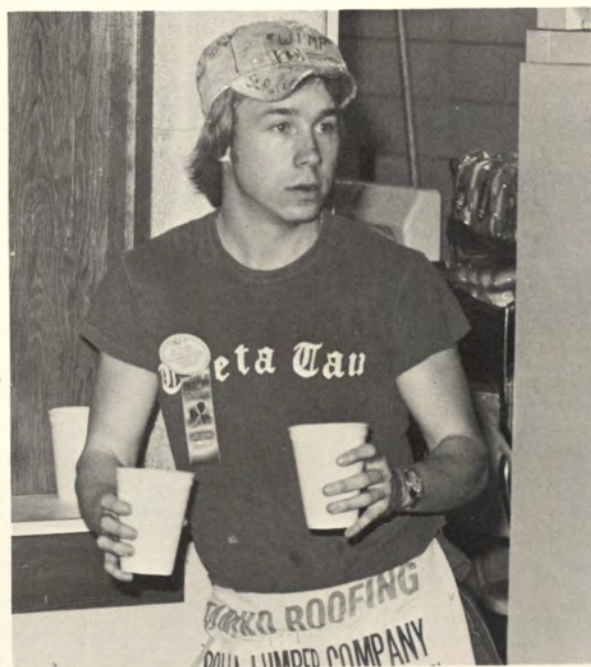

Lambda Chi Alpha was very active in public relations this year. Our 14th annual Benefit Chicken Dinner was met with great success. We were able to donate about \$500 each to the State School #23 and the Cerebral Palsy School.

The famous Lambda Chi gang "kidnapped" the Rolla city mayor and chief-of-police. They were held for a ransom of food which was donated to 20 needy families in Rolla.

We skated with the children of State School #23. At Halloween time, we invited the kids over for cake and ice cream with a few games thrown in for fun. Christmas rolled around and "Santa" visited the children of the State School once again.

Pi Kappa Phi is small, but that very situation has promoted a closeness where it's hard to run away from problems and get lost in the crowd. Love fulfills all the commandments. However, anything that is worth something must be tested. Living with a small group of people is an ideal way of learning and growing in love toward each other. In Pi Kappa Phi, responsibility and work is shared. Interests are diversified and range from audio equipment to tennis.

The brothers of Sigma Nu, members of the oldest fraternity on campus, enjoyed another year of growth and advancement. We began the year by pledging a freshman class of 19 men. These young men combined with the upper classes enabled us to place in the top four in both scholastics and intramurals. We stayed active in campus events by building a float for St. Pat's and participating in Theta Tau Ugly Man.

The school year of 1975-76 was a very productive year for Sigma Phi Epsilon. We started the year off by welcoming 35 pledges, the largest pledge class on campus and in our national fraternity. This has also been a very good year for sports. So far we have taken a first in football, handball, and archery and a second place in basketball. We plan to finish very high in intramurals. Our public relations has been outstanding especially within the community. We received the "Outstanding Community Service" from the Rolla Chamber of Commerce along with collecting over \$1000 for the American Lung Association by participating in a spirit run to Columbia.

Tau Kappa Epsilon's major accomplishment during the 1975-76 school year was the construction of a three story addition to the TKE house. Construction began during the summer and was completed in January 1976. Finishing touches, including paneling in the basement and a bar, were added in March. Governor Bond formally dedicated the new house during St. Pat's party weekend. More than fifty alumni from across the country returned for the occasion.

TKE was well represented in intramurals as they finished first in their league in all five major sports. A championship in soccer and a third place finish overall capped off a successful year.

Other accomplishments for the year included winning Greek Week for the fifth year in a row, placing second in IFC Sing, hosting the Second annual TKE Mid-America Softball Tournament, and completing two major service projects.

The school year of 1975-76 was very rewarding for the men of Sigma Pi. The first semester saw the brothers participating in the IFC Clean-Up, Intramurals, and the IFC Sing, and sponsoring an all-campus party at the Chapter House. We also had our annual "Great Pumpkin" on Halloween. The second semester began with the initiation of ten fine men into the chapter ranks. The construction of our St. Pat's float began, following the appearance of "green" on campus. Officers at the start of the school year were Ted Cottrell, President; Sean Price, Vice-President; Steve Partney, Treasurer; Tim Kirschbaum, Secretary; Randy Lubbert, Alumni Secretary.

THETA XI

The Alpha Psi Chapter of the Theta Xi Fraternity has had a very busy summer and fall semester. The Chapter more than doubled its membership, and again filled its house. With such an increase in manpower, the Chapter participated in many special events, such as several community work projects, a party for children attending the Rolla State School, an active participation in intramurals, and despite the number of members, the Chapter managed to take the APO Blood Drive Trophy.

Triangle, a social as well as a professional fraternity, is a brotherhood of engineers, architects and scientists. Its membership has grown to the point of expansion into an Annex next door—Triangle West. We are active in the Gamma Alpha Delta sponsored work projects and recently aided in remodelling a building in St. James for the senior citizens of that community. With these accomplishments behind them, Triangle is eagerly looking forward to the new challenges of its fiftieth year.

EDITOR'S NOTE

During the past few years the yearbook staff has come under frequent attack by the students and the organizations representing the students. Most of the complaints have been fair and just, poor copy, bad pictures, and too often large amounts of blank space have been some of the reasons. I personally agree with most of these complaints, this is one of the reasons why I wanted the editorship for the 1975-76 Rollamo. With this book, I hope all complaints can be stopped. There has been a lot more work put into the planning, photographer, and general layout than there has been in the last several years. So for the few who read this ending note, I give you the best possible yearbook that I and this staff could possibly put together under the current financial situations.

For those who believe that the yearbook should be optional, no possible way. Just as an example, Western Illinois University has nearly 13,000 students, of which only 1,800 buy yearbooks. The cost of their book which is the same size as this one, without the color division pages and end sheets, is \$17. So how many students on this campus would buy a yearbook for \$17. I'll leave it at that.

This book would be nothing without the hard work of Mark Lorenz and Kent Bagnall, a special thanks to both of them for their help and photography.

Thanks also to Glenn Johney, best of luck with the 1976-77 Rollamo.

And Jackie DeThorne, Mike DiNapoli, Paula Marcellus, the bobbsey twins Steve Ernst and Russel Brazeal, and all the other photographers.

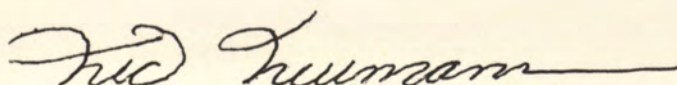

This book could not function without the help and encouragement of our advisor, Lance Williams, take care council person and get out of the racket before they corrupt you.

Pischel Yearbooks with Paul Coram have been super, its been a pleasure.

Steven Studios with their wierd photographers have been great, thanks for the monkey.

And to UMR, the last 6 years have been special and even fun years, to you, pull your head out.
